GENERAL INFORMATION

Asset® RTU is a plant nutrient solution that contains a proprietary fertilizer additive. When used in conjunction with sound fertility practices, Asset® RTU improves quality and production for a wide range of agricultural, ornamental, and turf practices.

SPRAY MIX COMPATIBILITY

Applications of Asset® RTU with pesticides are possible provided that good agitation of the spray mix is maintained. Always check compatibility prior to mixing and apply the spray mix as soon as possible. Follow the mixing sequence below:

1. Water
2. Asset® RTU
3. Pesticides

Asset® RTU is compatible with most liquid fertilizer/pesticide spray mixes at manufacturers' specified label rates. However, it is recommended that a "jar test" be performed prior to actual application. In the event of fertilizer/pesticide compatibility problems, the addition of a stabilizing/compatibility agent is recommended.

1. Water
2. Fertilizer
3. Asset® RTU
4. Approved compatibility agent (if needed according to jar test)
5. Pesticides

SOIL APPLICATIONS

For in-furrow, banded, side dressed and broadcast applications through conventional equipment, use Asset® RTU at the rate of 16-96 oz. (1-6 pints) per acre. Best results are obtained when Asset® RTU is incorporated, injected, or applied alone in a zone or band in the soil or with fertilizer at a minimum depth of two (2) to four (4) inches. The recommendations for use of this product are based upon the best current information available.

TRANSPLANT SOLUTIONS

Asset® RTU can be used in transplant solutions. Contact your Helena Dealer for additional information.

ORNAMENTAL USES

Use 1 qt/100 gallons of water as a drench solution for soil or apply 2 qts./100 gallons of water as a directed spray. The applied spray solutions should be incorporated into the root zone by irrigation.

TURF APPLICATIONS

Apply 2 qts./acre and incorporate into the root zone by means of irrigation.

USE WITH DRY GRANULAR FERTILIZER

Asset® RTU may be impregnated on most dry nitrogen fertilizers and/or blends that are composed of at least 50% of a combination of urea, nitrate, or ammonium phosphate. Uniform application of the material is necessary to ensure optimum results.
